Title Index, Optical Engineering Vol. 21 (1982)

Issue No. 1 (pp. 001/154); No. 2 (pp. 155/376); No. 3 (pp. 377/568); No. 4 (pp. 569/802); No. 5 (pp. 803/956); No. 6 (pp. 957/1098)

AlGaAs laser diodes, high-power single-mode, 1066
Acoustic data, two-dimensional optical processing of one-dimensional, 804
Acousto-optic devices for signal processors, characteristics of, 076
Adaptive filtering for image enhancement, 108
Adaptive optics, phase retrieval and diversity in, 829
Adaptive radar array processing using an iterative optical matrix-vector processor, multidimensional, 814
Adaptive spatial/temporal/spectral filters for background clutter suppression and target detection, 1033
Advanced X-ray Astrophysics Facility (AXAF), high resolution x-ray scattering measurements for the, 063
Aerial thermography, quantitative methods in, 864
Air-broadening coefficients in the 9 μm region, ozone, 548
Airborne ground velocity determination by digital processing of electro-optical line sensor signals, 370
Airborne video image processing, 087
Alignment support of the Magnetic Field Satellite (MAGSAT) vector magnetometer calibration, optical, 506
All-reflective zoom optical system for the infrared, on the analysis of an, 868
Amplifier trains with nonlinear conjugation techniques, compensation of laser, 243
Analysis of rotating structures using image derotation with multiple-pulsed lasers and moire techniques, 474
Analysis system: applications to moire contourogram and interferogram, interactive fringe, 901
Analyzer (PSA) ellipsometry of conical elements, polarizer-surface-, 968
Angle of a reflecting prism, simple method for testing of the 90°, 1064
Angle of incidence reflectance spectroscopy (AIRS)—a tool for studying optical properties of solids and liquids, 056
Anisotropy on subjective image quality, the effect of sampling, optical transfer function shape, and, 023
Annealing of optical waveguides and by the use of integrated waveguide detection, reduction of the effects of scattering by laser, 293
Antireflection coatings for veiling glare reduction, 1039
Aperture radar (ISAR) image quality and target shape descriptions, effect of data reduction on inverse synthetic, 858
Aperture radar (SAR) image quality considerations, synthetic, 048
Aperture radar (SAR) processor, real-time optical synthetic, 822
Application of holographic interferometry to stress wave and crack propagation problems, 468
Application of moire methods to evaluation of structural performance of composite materials, 626
Application of specimen-grid moire techniques in large scale steel testing, 615
Application of wavefront reversal by stimulated Brillouin scattering, 252
Applications of nonlinear phase conjugation in compensated active imaging, 231
Applications of the interferometric strain/displacement gage, 483
Array, design and characterization of a Schottky infrared charge coupled device (IRCCD) focal plane, 945
Arrays, experiments with retrodirective, 281
Aspheric holographic optical elements, computer-originated, 133
Astronomy: overview of NASA planning, space infrared, 758
Astrophysics Facility (AXAF), high resolution x-ray scattering measurements for the Advanced X-ray, 063
Atmospheric boundary layer, meteorological models for optical properties in the marine, 847
Atmospheric optical propagation—an integrated approach, 775
Atmospheric spectroscopy using a diode laser heterodyne spectrometer, high resolution, 320
Automated cylindrical polishing of grazing incidence x-ray mirrors, 1051
Automatic fringe analysis using digital image processing techniques, 432
Autonomous vehicles, charge-coupled device (CCD) camera/memory optimization for expendable, 354
Axicon systems, wavefronts of, 333
Axisymmetric bodies, integrated photoelasticity of, 689

Background clutter suppression and target detection, adaptive spatial/temporal/spectral filters for, 1033
Background Explorer (COBE), the Cosmic, 769
Background spatial radiance gradients, jitter induced clutter in staring sensors arising from, 872
Backscattering, optical beam phase conjugation by stimulated, 257
Ball bearing inspection, optical scanner for, 113
Beacon, development of a flyable CO_2 laser, 794
Beam deflection by mechanical means, field curvature as a consequence of light, 073
Bending studies, reflection moire methods for plate, 663
Blue haze, deterioration of superpolished metal mirrors by, 743
Boundary layer, meteorological models for optical properties in the marine atmospheric, 847
Brillouin scattering, applications of wavefront reversal by stimulated, 252

C_n^2 at Poker Flat, Alaska, from mesosphere, stratosphere, troposphere (MST) Doppler radar observations, variability of, 347
CK_α radiation, low angle x-ray scattering of chloroplast with, 894
CO_2 laser beacon, development of a flyable, 794
Calculator assisted evaluation of the radiance factor and chromaticity coordinates of fluorescent films, 937
Calibration of optical systems for linewidth measurements on wafers, 882
Calibration, optical alignment support of the Magnetic Field Satellite (MAGSAT) vector magnetometer, 506
Calorimetric measurements of the power absorbed by cooled surfaces, 511
Camera and their clinical application, performance evaluation of image intensifiers coupled with photofluorographic, 296
Camera/memory optimization for expendable autonomous vehicles, charge-coupled device (CCD), 354
Carrier dynamics, degenerate four-wave mixing in semiconductors: application to phase conjugation and to picosecond-resolved studies of transient, 199
Caustics in the study of dynamic problems of running cracks, optical method of, 581
Cavity phase shift method for high reflectance measurements at mid-infrared wavelengths, 979
Characteristics of acousto-optic devices for signal processors, 076
Charge coupled device (CCD) test console,

microprocessor-based, 942
Charge coupled device (IRCCD) focal plane array, design and characterization of a Schottky infrared, 945
Charge-coupled device (CCD) camera/memory optimization for expendable autonomous vehicles, 354
Chloroplast with CK_{α} radiation, low angle x-ray scattering of, 894
Chromaticity coordinates of fluorescent films, calculator assisted evaluation of the radiance factor and, 937
Closed-loop mechanical testing, optical sensor for, 718

Performance evaluation of image intensifiers coupled with photofluorographic camera and their clinical application, 296
Performance, towards a complete model of photopic visual threshold, 002
Phase conjugation and optical resonators, 266
Phase conjugation and to picosecond-resolved studies of transient carrier dynamics, degenerate four-wave mixing in semiconductors: application to, 199
Phase conjugation by four-wave mixing in a waveguide, optical beam, 263
Phase conjugation by resonantly enhanced degenerate four-wave mixing, 190
Phase conjugation by stimulated backscattering, optical beam, 257
Phase conjugation in compensated active imaging, applications of nonlinear, 231
Phase Conjugation, Nonlinear Optical (Guest Editorial), 155
Phase conjugation, nonlinear optical, 156
Phase, iterative procedures for signal reconstruction from Fourier transform, 122
Phase retrieval and diversity in adaptive optics, 829
Photo-orthotropic elasticity: a new technique for stress analysis of composites, 679
Photo-oxidation of ethylene glycol laser coolant by laser flashlamp, ultraviolet, 1057
Photoelastic holography, visualizing stress fields with, 489
Photoelastic studies: isodyne and gradient photoelasticity, new development in, 672
Photoelasticity of axisymmetric bodies, integrated, 689
Photoelasticity, new development in photoelastic studies: isodyne and gradient, 672
Photofluorographic camera and their clinical application, performance evaluation of image intensifiers coupled with, 296
Photographic film pictures and digital images, interactive flying spot image scanner for direct matching of, 1009
Photographic systems, veiling glare in, 343
Photography as a practical alternative to holographic interferometry for measuring plate deformation, laser speckle, 478
Photography, high resolution moire, 602
Photography, multiple ruby laser system for high speed, 704
Photography:, techniques and applications, high speed, 709
Photography, virtual fringe analysis method in time-average defocused speckle, 060
Photopic visual threshold performance, towards a complete model of, 002
Picosecond-resolved studies of transient carrier dynamics, degenerate four-wave mixing in semiconductors: application to phase conjugation and to, 199
Plasmas, laser diagnostics for inertial confinement fusion, 751
Plate bending studies, reflection moire methods for, 663
Plate deformation, laser speckle photography as a practical alternative to holographic interferometry for measuring, 478
Plates, family of grating techniques of slope and

curvature measurement: for static and dynamic flexure of, 721
Polar molecules in solid inert gas matrices, far infrared (FIR) Fourier spectroscopic studies of molecular motion of, 553
Polarizer-surface-analyzer (PSA) ellipsometry of conical elements, 968
Polishing of grazing incidence x-ray mirrors, automated cylindrical, 1051
Polishing of optical surfaces, ion, 1002
Power absorbed by cooled surfaces, calorimetric measurements of the, 511
Principal-component imagery for statistical pattern recognition correlators, 043
Prism, simple method for testing of the 90° angle of a reflecting, 1064
Processing, color image retrieval from incoherent speckles with white-light, 798
Processing of one-dimensional acoustic data, two-dimensional optical, 804
Processing techniques, automatic fringe analysis using digital image, 432
Processing using an iterative optical matrix-vector processor, multidimensional adaptive radar array, 814
Processor at the University of California, San Diego, a microcomputer-based hybrid, 557
Processor, multidimensional adaptive radar array processing using an iterative optical matrix-vector, 814
Processor, real-time optical synthetic aperture radar (SAR), 822
Processor, robust optical systolic long-code, 833
Progress and trends in x-ray laser research, 307
Projection moire, measurement of neck development in tensile testing using, 655
Projection moire techniques for absolute or relative mapping of surface shapes, shadow and, 640
Propagation—an integrated approach, atmospheric optical, 775
Propagation problems, application of holographic interferometry to stress wave and crack, 468
Properties of solids and liquids, angle of incidence reflectance spectroscopy (AIRS)—a tool for studying optical, 056
Prospective vitreous materials for infrared fiber optics, 118
Pseudoconjugation, wavefront compensation with, 271
Pulse shaping, signal-to-noise ratio dependence on frame time, time delay and integration (TDI), and, 528
Pulsed laser spectroscopy: an inexpensive approach, 837
Pulsed lasers and moire techniques, analysis of rotating structures using image derotation with multiple-, 474
Pyrometers for measuring dust explosion temperatures, infrared, 082

Quality and interpretability: database and hardcopy studies, digital image, 014
Quality: computer modeling a complete electro-optical system, an extension of image, 038
Quality considerations, synthetic aperture radar (SAR) image, 048
Quality, the effect of sampling, optical transfer function shape, and anisotropy on subjective image, 023
Quantitative methods in aerial thermography, 864

Radar array processing using an iterative optical matrix-vector processor, multidimensional adaptive, 814
Radar (ISAR) image quality and target shape descriptions, effect of data reduction on inverse synthetic aperture, 858
Radar observations, variability of C_n^2 at Poker Flat, Alaska, from mesosphere, stratosphere, troposphere (MST) Doppler, 347
Radar (SAR) image quality considerations, synthetic aperture, 048
Radar (SAR) processor, real-time optical synthetic aperture, 822
Radiance factor and chromaticity coordinates of fluorescent films, calculator assisted evaluation of the, 937
Radiance gradients, jitter induced clutter in staring sensors arising from background spatial, 872
Radiation at the National Bureau of Standards, vacuum ultraviolet and extreme ultraviolet radiometry using synchrotron, 951
Radiation from partially coherent sources, 362
Radiation, low angle x-ray scattering of chloroplast with CK_α, 894
Radiation therapy verification, digital imaging for, 888
Radiography, methods of sensitometry for low energy, 105
Radiologists, on the intensities of fluorescent light at the corneas with particular application to, 517
Radiometry, effects of coherence in, 927
Radiometry using synchrotron radiation at the National Bureau of Standards, vacuum ultraviolet and extreme ultraviolet, 951
Range compression, simplified derivation of geometrical dynamic, 800
Reactor components, the use of sandwich hologram interferometry for nondestructive testing of nuclear, 542
Real-time optical synthetic aperture radar (SAR) processor, 822
Realistic fire situations, identification and assessment of factors important in modeling of electro-optical system performance in, 148
Receiver, a design approach for a thermally compensated injection laser stack transmitter/, 1046

significantly to success of industrial R&D project. Challenging work and career opportunity offered in modern research center with up-to-date instrumentation. Send resume to FSRM, Swiss Foundation for Microtechnology Research, 7 rue Jaquet-Droz, CH-2000 Neuchâtel 7, Switzerland.

Positions Wanted

Applied Physicist. Six years experience in thin film technology and processes, electro-optic systems, electrochromic displays. B.S., physics; M.S./Ph.D., electrical engineering-material science. I.C.S.T., London University. Desires work in innovative research and development of electro-optic systems utilizing advanced technology, thin film processes, archival storage media, video or display technology, VLSI work. Contact Karam S. Kang, 8 Hillcrest Road, Acton, London, W39RZ England.

Applied Vision Research. Entry level position. Interested in computer vision, emphasis on development of pattern recognition systems for robotics, automatic inspection, image interpretation. Also interested in problems concerning visual displays and man-machine interface. M.S., mechanical engineering; Ph.D., visual psychophysics and perception. Numerous publications including visual acuity, critical flicker frequency, eye movements, stress analysis. Contact David Regal, 205 Elliott Hall, 75 E. River Rd., Univ. of Minnesota, Minneapolis MN 55455.

Laser Electro-Optics Technician. Completed schooling and experience in R&D of large spacecraft structures with major research corporation. Experience includes Michelson interferometry, optics, utilizing complex electronic equipment along with vacuum and thermal apparatus. Pioneer research in opto-acoustic emission. Contact Bill Dittrich at 213/648-6199 weekdays or 213/793-1785.

Photo-Electronics Technician. Graduate of major midwestern technical college with extensive training in high speed motion, high speed still, and motion analysis photography; flash tube circuits. Also training in digital electronic control systems, optics, holography, 8080 microprocessor, printed circuit boards. Full knowledge of photo-electronic test capability. Desires work in this or related fields. Will relocate. Contact Clifford J. Kujawski, 11819 West Lincoln Ave., West Allis WI 53227.

Thin Film Physicist. Highly experienced in optical thin film vacuum deposition technology, including process development, optical materials, characterization, design and computational techniques, instrumentation, and project management. Expertise in UV, visible, IR coating applications. Desires senior position in high technology organization. SPIE Code No. 98.

Vision Psychophysicist/Medical Physicist. Ph.D. in medical physics with 5 years postdoctoral experience. Background in basic and clinical vision psychophysics and electrophysiology, radiological physics, evaluation of observer performance with imaging systems, color vision, optics, physiological optics, photometry, signal detection theory, computer programming. 9 refereed publications, 3 proceedings articles, and 9 abstracts. Seeking research and/or development position in medical, industrial, university environment. SPIE Code No. 99.

Equipment for Sale

Spectrometer (1. sec. Gurley readout); **small angle generator** (1. sec. readout 2.5 deg. range). Both items in excellent condition. Harold P. Chinick, 304 S. George St., Mt. Prospect IL 60056. 312/255-2450.

Vacuum Oven. Duo-Vac 200, C-120 V, Cole-Parmer, Stock No. 5061-01 (1980-$915, new). **Vacuum/Pressure Forepump.** Cole-Parmer Stock No. 7148-02 (1980-$310, new). Both little used. Best offer. Contact Eric Miller, 105-16th St., Lynden WA 98264. 206/354-3232 or 206/671-9921.
